Green World Co Pty LtdTM
"For A Sustainable Future"

GREEN WORLD's mission is to provide sustainable products for a sustainable future. The watchwords of sustainability – reduce, reuse, recycle – direct us towards our ultimate goal of a zero waste economy. In the meantime, in an economy that does produce waste, our disposable foodservice products are designed to transform waste into healthy, new soil through composting.

Hence, our advice to consumers is familiar: "Reduce, reuse, recycle." Think hard before buying any single-use disposable product, even compostable ones. When choosing any product first consider how to reduce the amount that you buy and then consider whether the product is something you can reuse again and again. Finally, consider whether the product is something you can recycle when you are done with it. reduce the impact of our consumption on the environment and help create a better and sustainable world.

GREEN WORLD CO PTY LTD provides high quality compostable food service disposables and food packaging products for use in schools, corporate cafeterias, restaurants, hospitals, parties etc. Our products are made annually renewable resources like corn, sugarcane, and wheat straw fiber. Corn, Sugar cane and wheat straw fiber are also discarded by-products of the agriculture industry and we are using this discarded fiber/starch to make sustainable alternatives to plastics and styrofoam. And most important, our compostable products have more competitive price.

Green World Co Pty LtdTM
"For A Sustainable Future"

By lining with renewable IngeoTM polylactic acid (PLA), we've created cups that break down in a commercial compost facility and return to the Earth.
All our cup lids are made from PLA resin and they are 100% compostable too.

Our pulp environmental protection tableware uses the nature sugar cane as the the raw material .after technical handling and add food grade chemical additive to make the tablewares with below characteristics:

- 1.Healthy ,Nontoxic,Harmless and sanitary.
- 2.Resistant to 120 degree Celsius oil and 95 degree Celsius water without leaking or deformation.
- 3.Biodegrades in three months, no pollution and friendly to eco-system.
- 4.Available for microwave oven and frigde.
- 5.custom design service offered.

Poly Lactic Acid (PLA), widely known as 100% biodegradable material, is derived from 100% annually renewable plant resource. Lactic acid is made from dextrose by fermentation. Then through series of process, such as refining, dehydration, polymerization, high-temp de-polymerization and finally polymerization, lactic acid is then converted into PLA resin.

Our PLA cutlery is made from Ingeo™ modified PLA which could resist a high temperature up to 93°C/200°F, great for hot food.

PSM Cutlery (formerly known as Plant Starch Cutlery) is excellent for hot foods with a heat tolerance up to 200° F. Reinforced handles provide extra strength and stability. PSM Cutlery is made with 70% renewable materials and 30% fillers like polypropylene and talc. Compared to traditional cutlery made from 100% virgin plastics, this cutlery is a more sustainable choice.
